

**NOW! Give your customers
a lookup screen to search
movies in your ROCKET titles
database**

**...AND ROCKET WILL
TELL THEM IF A TITLE IS
IN YOUR STORE, AND IF
IT'S AVAILABLE TO BUY
OR HIRE!**

MovieFinder allows you to set up a separate in-store screen where your customers can easily look up the thousands of movies available on DVD and/or video stored in your **ROCKET** movie database.

The powerful, but simple to use, search engine will search by title, star, director, latest releases or by any of the words in the title.

As *MovieFinder* is integrated into your **ROCKET** POS system, it always knows which titles in the database are available in your store. It'll even tell customers if there are copies currently available for hire or purchase, and where to find them in the store!

* *MovieFinder* runs off a separate workstation on the **ROCKET** network. It requires Windows XP (Home or Pro) in 1024x768 resolution, and 256mb RAM. As the data is read from the **ROCKET** server the hard drive doesn't need to be large. *MovieFinder* cannot be exited by the public unless the machine is reset. To exit *MovieFinder* you need access to the *MovieFinder* administration menu, and a password.

* *MovieFinder* operates in conjunction with **ROCKET** and the integrated VideoSource Select movie title database provided by Trade Service of Australia.
