Linking every customer to every transaction

NO MORE "It wasn't me who hired that movie".

NO MORE arguments with clients as to who hired or bought what and when.

NO MORE searching hours of security tapes to find a face.

Set up at the serving counter, **ROCKET**'s fully-integrated **PHOTOCHEK** Transaction ID module automatically takes a photograph at the start of each transaction, to show the person being served. There's nothing extra for the operator to do!

FULL TRANSACTION DETAILS

Saved on your computer's hard disk, each photograph is linked to the transaction with full details of what was hired, returned or bought, and the date and time.

The photo of the member is taken at the end of the transaction (left) then stored with the details of his hires and purchases (right).

And the photographs are easy to access; view them on screen when enquiring on late items or unpaid overdue fees or from a member's history, and when calling for overdues. Photos are compressed, and automatically deleted after a set time.

PRINT OUT, EMAIL FOR DEBT COLLECTION

Plus for debt collection purposes, **ROCKET** allows you to print the photo on a special form showing the member's details and full details of the transaction. And it can also be emailed.

A camera that supports the Twain interface is all that's required for each serving screen. Even better, a face tracking camera makes it easier to get a good photo of the member's face.
