PURCHASE ORDERS MODULE

Takes all the effort out of stock receipting/data entry

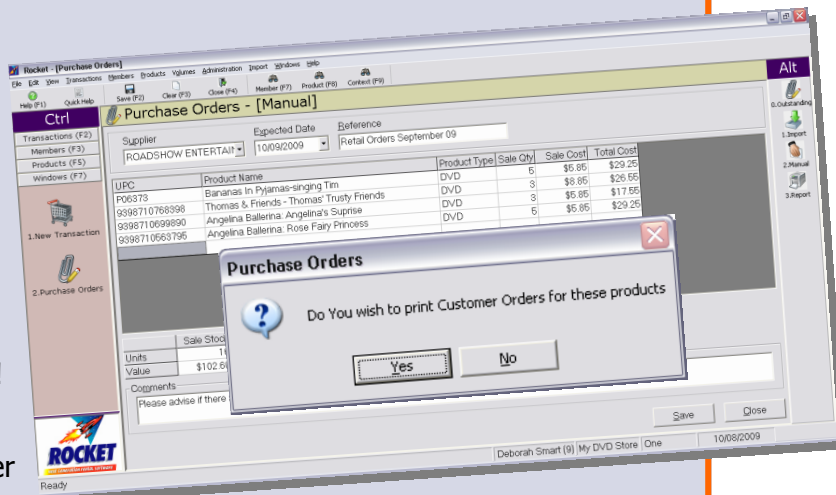

It's automatic - save hours every month!

Brand new OPTIONAL MODULE

ROCKET's powerful Purchase Orders/Customer Orders module greatly simplifies the process of importing and entering monthly stock orders placed through your group head office or through a wholesaler.

And it just as easily handles ad hoc purchase orders directly with a supplier. Email the order straight out of **ROCKET!**

Rental and retail purchase orders can either be imported from head office after the monthly rental and retail order is completed via your head office system, or entered at store level for emailing or faxing to the supplier.

Manual data entry no more!

The Purchase Orders import process takes away most of your workload:

- ▶ it automatically creates the new products in your master product file
- ▶ and, stock arriving in-store is automatically receipted against the order!

The automated process means you can quickly check the cost and selling prices against the suppliers' invoices, and you no longer have to spend hours every month doing manual data entry of hundreds of new products.

**IT'S GOING TO SAVE YOU PLENTY
IN TIME, EFFORT AND MONEY!**

As well, the module's Customer Orders function efficiently handles all over-the-counter orders or lay-bys of retail product, and displays details of what has been ordered and what has been pre-sold.

Three management reports tell you what stock is needed, what's coming, and to assist you with ordering.

IT'S THE COMPLETE ORDERING SOFTWARE!

Don't wait. Start saving money.
