PURCHASE ORDERS MODULE

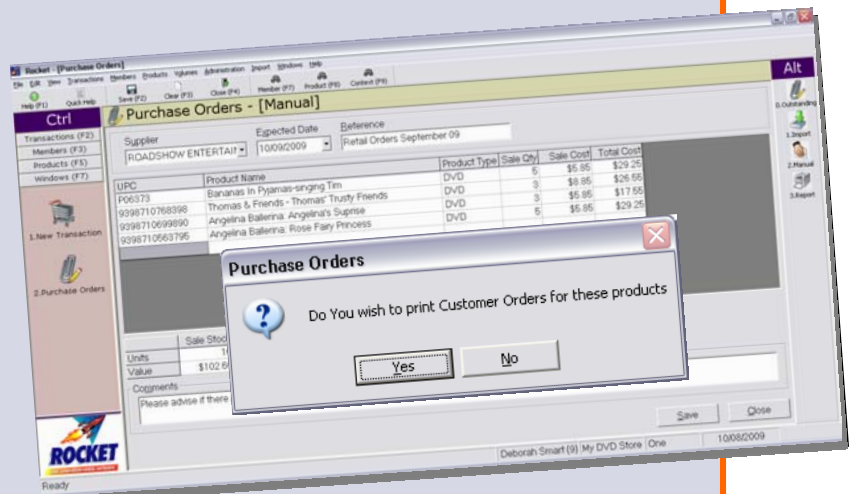

Takes all the effort out of stock receipting/data entry

It's automatic - save hours every month!

Brand new OPTIONAL MODULE

ROCKET's powerful new Purchase Orders/Customer Orders module greatly simplifies the process of importing and entering monthly stock orders placed through your group head office or through a wholesaler.

Rental and retail purchases placed via my video store can be imported direct from the file supplied within the my orders tab.

Manual data entry no more!

The Purchase Orders import process takes away most of your workload:

- ▶ it automatically creates the new products in your master product file
- ▶ and, stock arriving in-store is automatically receipted against the order!

The automated process means you can quickly check the cost and selling prices against the suppliers' invoices, and you no longer have to spend hours every month doing manual data entry of hundreds of new products.

IT'S GOING TO SAVE YOU PLENTY IN TIME, EFFORT AND MONEY!

As well, the module's Customer Orders function efficiently handles all over-the-counter orders or lay-bys of retail product, and displays details of what has been ordered and what has been pre-sold.

Three management reports tell you what stock is needed, what's coming, and to assist you with ordering.

IT'S THE COMPLETE ORDERING SOFTWARE!

Don't wait. Start saving money.
